

Position Announcement Manager of Plant Pathology

BioDiagnostics, Inc. is a leading provider of seed testing services serving the seed industry with customers worldwide. BioDiagnostics uses state-of-the-art technologies including ELISA and DNA methods to assist seed producers in delivering the highest quality product to the market.

Description

BioDiagnostics, Inc. is seeking an energetic and creative scientist to facilitate the growth and development of all aspects of plant pathology testing. This is a unique opportunity to initiate a laboratory that will develop and provide a suite of pathology testing services to the vegetable and agronomic seed industry. The Manager will

- **identify and execute a comprehensive plan to add pathology testing services needed by the seed industry,**
- **provide the vision to make BioDiagnostics a premier lab for plant pathology testing,**
- **offer innovative solutions to long-standing problems in pathology testing,**
- **consult with customers to develop appropriate services, test plans, and interpret test results,**
- **attend industry meetings and conferences to identify new services needed by the seed industry and promote existing services,**
- **collaborate with appropriate BioDiagnostics personnel to develop new methods for testing,**
- **manage the addition of new technologies within the proposed budget.**

Qualifications

- **Ph.D. in plant pathology, molecular biology, or related field.**
- **Demonstrated success in plant pathology.**
- **Knowledge of pathology testing needs in the seed industry.**
- **Excellent communication skills.**
